# the SEPARATION

In October 2017, SCV Valve, LLC completed the acquisition of the SCV brand, all intellectual property, and inventory from a previous partnership with Southern California Valve.

All operations in California ceased and were moved to the SCV Valve, LLC manufacturing complex in Santa Fe, TX.

As a part of the agreement, Southern California Valve canceled their API 6D & API 6A licenses and no longer manufactures valves. SCV Valve, LLC continues to hold both API 6D & API 6A monogram licenses for the SCV brand in Santa Fe, TX.

## Harness Earth's Energy

As the demand for green energy skyrockets, sources for renewable energy plants increase daily. Geothermal Power Plants satisfy this demand very well with a minimal footprint and little impact on the environment. Geothermal energy is constantly produced within the earth and is a very clean, natural, reliable, and renewable energy source. The controlled capture and processing of this high-heat, pressurized release of thermal energy requires precision engineering and equipment.

Of the three types of Geothermal plants [Dry Steam, Flash Steam and Binary Cycle] high-quality, high-performance valves are critical components for successful geothermal energy conversion and delivery. All three geothermal power plants utilize heat in the form of steam, brine and/or heat transfer fluids to activate steam turbines which in turn produce electricity.

SCV manufactures a complete line of low-maintenance, dependable Thru Conduit Gate and Wedge Gate Geothermal Valves designed for this specific application and are made of materials that resist the inherent impurities contained in the process fluids and gasses, silica scaling [which can cause build-up, valve leakage and/or complete valve failure] and high pressures and heat.

The SCV Geothermal Valve Line has been proven to operate efficiently at temperatures well above the required specifications [700°F/371°C] while offering minimal pressure loss.
